It's Not Factor Accumulation: Stylized Facts and Growth Models

William Easterly and Ross Levine

The World Bank Economic Review, vol. 15, no. 2 177–219

The article documents five stylized facts of economic growth. (1) The “residual” (total factor productivity, tfp) rather than factor accumulation accounts for most of the income and growth differences across countries. (2) Income diverges over the long run. (3) Factor accumulation is persistent while growth is not, and the growth path of countries exhibits remarkable variation. (4) Economic activity is highly concentrated, with all factors of production flowing to the richest areas. (5) National policies are closely associated with long-run economic growth rates.
